

intorrent CYCLONE

The First “Flood-Proof” Phone System for Small and Medium Businesses

Just say no to the traditional phone system, the proprietary PBX of the past. Grow, change and adapt your business communications at your own pace with Intorrent Cyclone, the state-of-the-art, open source solution for small- and medium-sized businesses.

Utilizing Asterisk software, Intorrent Cyclone’s comprehensive feature set and powerful functionality can be configured to meet any corporate communications requirements.

Intorrent Cyclone also spares you from the big bills and hassles of the “phone company.” With the Intorrent solution powered by Asterisk open source, software upgrades are a quick download, not a (3-hours-late) visit from the service guy. By empowering your own IT staff and managing your own network infrastructure, you eliminate costs such as moves, adds and changes, trip charges and capacity upgrades.

Communications technology is a constant, onrushing flood of chaos and innovation. Businesses sink or swim by the decisions they make and the solutions they choose. Intorrent Cyclone keeps companies cruising from a communication standpoint, so they can concentrate on their bottom line, not their phone system. Just the way you want it.

Super Economical

- Simplified licensing
- Eliminates expensive technician visits
- Use your existing network infrastructure
- 40 - 60% lower total cost of ownership (TCO)
- Choose the service provider that suits your needs
- Easily integrate remote workers and road warriors
- Built-in conference bridges reduce 3rd party dependence
- Ext. to ext. dialing between locations, even internationally

Incredibly Easy to Use

- Fully Web-based interface
- Schedule automatic backups
- On site; no secondary networks needed
- Extension templates to quickly add new users
- Automatic call routing based on date and time
- Extension groups to manage extensions efficiently
- Multiple administrator log-ins with controlled access

Supremely Efficient

- Click to dial
- Video integration
- Detailed call reporting
- Drag and drop transfer
- Mobility; find me, follow me
- Chat integration using Jabber
- CRM and Web application integration
- Unified Messaging (voicemail to email)
- Fax integration including notification emails
- Presence; knowing when co-workers are not available
- Unlimited custom greetings, menus and music on hold
