TECHNOLOGIES

Building a Business
Phone System is **Fast**,
Easy, **Affordable**...
and **Fun!**

Intorrent Technologies
Shows You How in Four
Quick Steps!

3-300 phone users
recommended for
business owners
of all ages!

Welcome to Phone Land!

How to Play

With most business phone system providers, building a solution is a game you can't win. That's because these providers are 1) expensive, 2) proprietary, or 3) they lock you in with bundled services.

Intorrent Technologies gives you complete control of the game board. It's your move at every step— you pick your hardware, you pick your phone lines, you'll use software that lets your business grow and adapt, and you pick the best deployment for your operation. Intorrent's solutions are unbundled (with no lock in), flexible and future proof. With Intorrent, YOU WIN the game of business communications! So let's play!

Phone Land Rules

- 1) It's *your* business, so it's always *your* turn.
- 2) Move from step to step, then read the inside panels to find the best option for your business.
- 3) That's it! Have fun!

Finish!

Step 1: Phones

You've Got Choices

Invest in Your Network with SIP Standard Hardware

This part is fun. So long as you choose SIP-standard hardware, you're in great shape. Intorrent supports over 75 phones, including Polycom, Yealink and Cisco brand models. Non-proprietary phones can be used with any mix of software and services.

Because of SIP, shopping for phones is like shopping for a PC. You can go with Dell, HP or a Mac product, and they all work because they all connect to the same network. For phones, SIP is that network standard.

Provisioning for 75+ Phones & Smart Device Interoperability

(iPhone, iTouch, iPad; Android)

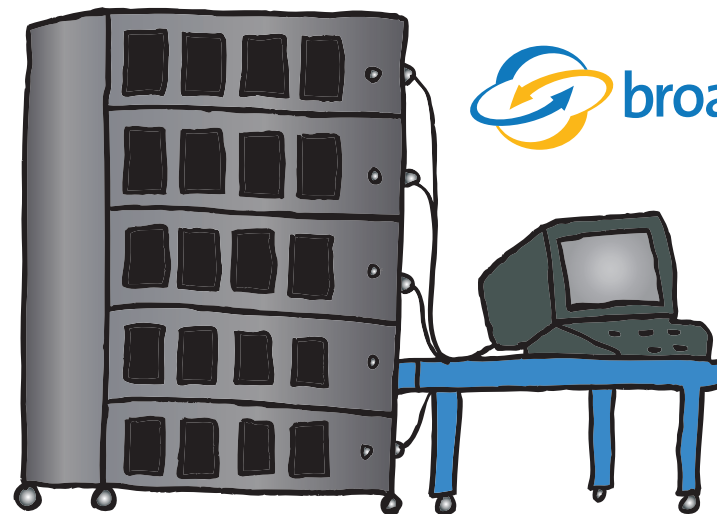

Step 2: Phone Lines

SIP Trunking

Open Standards—Opening New Doors for Your Business.

A SIP Trunk is the new “phone line” of Voice over IP. SIP Trunking provides digital features and expanded functionality for enterprise-level control. Even better, SIP Trunks can be purchased individually, so you only pay for the service you need. Intorrent partners with Broadvox, a leader in SIP Trunking, for its phone solution deployments.

New SIP Trunking features, including remote cell phone connectivity (ring to cell phone) and increased identity control (customize your caller ID), allow small companies to make a big-company impression for a fraction of the price tag.

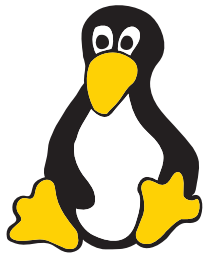

Step 3: Software

Intorrent is Powered by Asterisk Open Source.

Asterisk, sponsored by Digium, is the world's leading open source telephony project—software first designed for Linux, supported by a community of developers and integrators who are constantly creating new phone applications.

Open source means you can make changes without breaking the bank. But there are literally thousands of Asterisk applications! Intorrent refines, verifies and packages these developments for commercial use. For its reliability, footprint and business applications, Intorrent's solutions are powered by Asterisk.

VoIP Telephone Systems

Step 4: Deployment

Any Way You Want It

Deployment Options for any Company Requirement

No two businesses are the same. Each organization has its own specific communication requirements—security, compliance, redundancy, investment cost and carrier contract commitments. All are important factors in choosing a business phone system.

Intorrent's solutions can be deployed in many ways to meet the needs of any small- or medium-sized business.

Pick Your Preference
